

Cardiology:

PAEDIATRIC AND FOETAL CARDIOLOGY

3fivetwoTM
HEALTHCARE

At 3fivetwo, our Paediatric Cardiologist is available for consultation with children, from birth up to 16 years, who have been referred with:

- Heart murmurs
- Blue spells
- Palpitations
- Chest pain
- Family history of congenital heart disease

3fivetwo private antenatal care packages routinely provide access to a Consultant Paediatric Cardiologist who will provide support, information and advice on treatment options to any family whose baby or child may have a heart condition. This service is available as a stand-alone appointment.

For pregnancies which are judged to be at increased risk of cardiac abnormality, more detailed scans of the foetal heart are offered using non-invasive foetal echocardiography.

Indications include the following:

- Family history of Congenital Heart Disease
- Foetal heart or rhythm abnormalities detected during a routine pregnancy ultrasound scan
- Abnormality of another major organ system
- Insulin-dependent (type 1) diabetes mellitus
- Exposure to some drugs in early pregnancy
- Abnormal amniocentesis

For further information or to arrange an appointment, call our Dedicated Private Patient Line:
